- ◆ PCD / CBN can supply any inserts as per your requirement
- ◆ Relapping Facilities Available

### ◆ PCD Grades and applications

Grade	Description	Application
<b>RF05 (Fine)</b>	Average grain-size of 5 $\mu\text{m}$ Low metal content High abrasion resistance High toughness	Finishing operations in moderately abrasive materials, high-silicon aluminium, plastics, composites, precious metals, leaded alloys and wood.
<b>RM10</b>	General purpose grade Average grain-size of 10 $\mu\text{m}$ Low metal content High abrasion resistance High toughness	Roughing and finishing of very abrasive materials, medium-silicon aluminium alloys, abrasive copper alloy powder metals, graphite, reinforced resins, carbon, rubber, fibreglass, hardwoods and laminates. Good surface finish.
<b>RC30X</b>	Average grain-size of 30 $\mu\text{m}$ Low metal content Extremely high abrasion resistance Extremely high toughness	Mainly used in roughing operations of extremely abrasive materials, interrupted cuts, rough machining, high-silicon aluminium, powder metals, cemented carbides, graphite, composites, green ceramics, phenolics, bronze and silicon reinforced resins. Extremely wear resistant and with a very good tool life.

### ◆ CBN Grade and application

Grade	Description	Application
<b>RN90</b>	High CBN content 90% cubic boron nitride	General purpose grade Machining of pearlitic cast iron Roughing and finishing of high temperature alloys, flame spray metals, Rough machining of hardened steels
